

kids and our grandkids, let them shift for themselves.

I remember when the Vice President came and asked me if I would vote to drill in ANWR, and I said I would be happy to do that when you commit—this was Dick Cheney—that you're going to use all the revenues you get from ANWR to invest in alternatives, because we're way late in doing what Hyman Rickover said we needed to do in 1957.

I noted that we were going to leave our kids a huge debt. It's bigger now than I thought it would be then. I said, wouldn't it be nice to leave them a little oil?

Here is a quote from one of those studies. This was the first and the biggest of those studies, the so-called Hirsch, SAIC, big study: world oil peaking is going to happen, world production of conventional oil will reach a maximum and decline thereafter. That maximum was called the peak. A number of competent forecasters project peaking within a decade. It has happened. Others contend it will occur later. Prediction of the peaking is extremely difficult. He says that oil peaking presents a unique challenge. The world has never faced a problem like this. It is an unprecedented problem that the world faces.

I have a last chart here that I think kind of helps us to put this in perspective. And this shows the production of oil, and this chart is a few years old. We need to have it updated. But this is when oil was discovered, way back in the 40s, the 50s, the 60s, the 70s. This is the use of oil.

By the way, tonight when you do your prayers, thank the Islamic world for the oil price spike hikes in the 70s. Look what it did. It woke us up. If they hadn't awakened us and this curve continued, we would be through the top of the chart by now. Up until the Carter years, it was a stunning statistic. Every 10 years we used as much oil as had been used in all of previous history. Now look at the slope of that curve. It is much lower than that.

Our time is running out, and I must yield back; but I will come to the floor again soon, and we'll spend quite some time looking at this chart. Because if you had only one chart to look at where you were going to predict what you thought might happen in the future, I think this would be the chart, because you look back through history and see what has happened, and then you'll make a judgment. Wow, are we going to find that much more oil in the future that we found back here even with our increased capability to find oil? Yeah, we're going to find more, and we're going to pump more, but I think there is little or no chance that we'll be able to produce that oil fast enough to meet the growing demands of the world.

I love challenges. This is a huge challenge. And I think that facing this challenge we can produce more jobs; we can be an exporter of the technologies

for green energy. I just feel challenged by this, Mr. Speaker, and I hope Americans feel the same way.

Thank you, Mr. Speaker. I yield back the balance of my time.

ENROLLED BILL SIGNED

Karen L. Haas, Clerk of the House, reported and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:
